To all whom it may concern:

Be it known that I, ANDREW J. ROBINSON, of Troy, in the county of Rensselaer and State of New York, have invented a new and valuable Improvement in Ventilators; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the annexed drawings, making a part of this specification, and to the letters and figures of reference marked thereon.

The figure 1 of the drawings is a representation of a transverse vertical section.

The nature of my invention consists in the construction and arrangement of a ventilator as an improvement upon a similar device for which Letters Patent have been recently granted to me.

In the annexed drawing, A represents the top dome and B the lower dome, which latter is provided at the bottom with a pipe or collar, C. At the top edge of the lower dome B, and at the bottom edge of the upper dome A, are projecting flanges a a, which may be either straight or curved, and the two domes are separated by means of brackets D D. These brackets are constructed as shown in the drawing, and support the top dome A as well as the surrounding shield G.

By the use of the brackets D D, I dispense with the screws or bolts heretofore used, and get a more firm and durable support for the top of the ventilator and the surrounding shield.

What I claim as new, and desire to secure by Letters Patent, is—

1. In a ventilator, having top and bottom domes A B, the flanges a a, projecting from the edges of both domes, as shown and described.

2. The brackets D D, constructed as shown, in combination with the domes A B and surrounding shield G, substantially as herein set forth.

In testimony that I claim the above I have hereunto subscribed my name in the presence of two witnesses.

ANDREW J. ROBINSON.

Witnesses:

J. B. SINSABAUGH,

G. H. PERRY.
